Giza, Egypt

PROFILE

Flutter Developer with **2+ years** of experience building production-ready cross-platform applications with **Flutter** and **Dart** for **Android TV, Fire TV, desktop (Windows, macOS, Linux), Android, and iOS**. Top contributor (**1,500+ commits**) to a multi-flavor **media streaming** platform at MIMOCODES, and developer of **Maskany**, Helwan University's official dormitory platform. Experienced in **Clean Architecture**, feature-first development, **SOLID** principles, and state management with **Riverpod, BLoC, Cubit, and Provider**. Skilled in video playback, **REST API** integration, dependency injection, automated testing (unit and E2E), and release management, within Agile/Scrum teams.

EXPERIENCE

Flutter Developer 03/2026 – Present

MIMOCODES

- Drive development of a **multi-flavor (white-label) media streaming** app as the top contributor, with **1,500+ commits (~65% of the codebase history)** across **18 feature modules**, using **Clean Architecture**, **Riverpod**, GetIt/Injectable **dependency injection**, and go_router.
- Ship one codebase to **5 platforms** (**Android TV, Fire TV, Windows, macOS, Linux**), building **D-pad / remote-control and keyboard focus navigation** and isolating platform-specific code behind clean abstractions.
- Deliver **Live TV, Movies, Series, Replay (catch-up), and Favorites** with playlist management, caching, and auto-play; integrate per-platform **video playback engines** (Android **Media3 / ExoPlayer**, fvp, media_kit) and optimize playback on Fire TV.
- Reduced new-app setup to **a single command** by building **Dart CLI tooling** that creates, validates, regenerates, and removes app flavors, plus **release automation** that builds isolated per-app artifacts and verifies them before shipping installers.
- Built a regression safety net of **200+ end-to-end integration test scenarios (Patrol)** running on Windows and real Fire TV devices, alongside **240+ unit tests**, catching platform-specific bugs before release.
- Collaborate in an **Agile** team through Git workflows, code reviews, Jira, and continuous refactoring.

Flutter Developer 09/2025 – 03/2026

MasteryHub

- Built and shipped scalable Flutter apps for **Android and iOS** with **Clean Architecture**, keeping features modular and testable.
- Integrated **Google Maps** location features, **QR code scanning**, **identity verification**, and **push notifications**.
- Structured state with **BLoC** and **Provider** for a predictable, responsive UI.
- Consumed secure **REST APIs** through a **Dio** networking layer with **GetIt** dependency injection, improving testability across the team.

Flutter Developer Intern 10/2024 – 04/2025

Elevate

- Developed cross-platform **Android and iOS** apps with Flutter and Dart, following **Clean Architecture** and **BLoC/Cubit**.
- Integrated **RESTful APIs** and wrote **unit tests**; took part in code reviews to keep code quality high.
- Delivered features in **Agile/Scrum** sprints using Jira and GitHub.

PROJECTS

Maskany – Dormitory Management System (Graduation Project)
Helwan University's official housing platform – modon.helwan.edu.eg

- Built a fully deployed dormitory management system that Helwan University students use to **apply for university housing** (live for the **2026/2027** academic year).
- Implemented the full student journey: **account sign-up**, personal and academic data entry, **electronic document upload**, application review and submission, and **live tracking of acceptance and room-assignment status**.
- Automated admin operations: **room allocation**, meal management, penalty tracking, **role-based access control**, real-time updates, and Excel import/export.
- Reduced administrative workload by **30%** and sustained **500+ concurrent requests** in performance testing with zero failures.

FitMaster – Fitness Companion App

- Developed a cross-platform fitness app with personalized workouts, **AI-powered coaching**, smart tracking, meal planning, and bilingual (Arabic/English) support.
- Implemented secure authentication, skill-level based routines, video instructions, daily personalized plans, and exercise categorization.

EDUCATION

Bachelor's Degree in Computers and Artificial Intelligence 06/2025
Helwan University
GPA: 3.51 / 4.0 | Grade: A

SKILLS

- **Languages & Frameworks:** Flutter | Dart | Cross-Platform (Android, iOS, Android TV, Windows, macOS, Linux)
- **State Management:** Riverpod | BLoC | Cubit | Provider
- **Architecture:** Clean Architecture | Feature-First Architecture | SOLID Principles | OOP | Design Patterns | Multi-Flavor Apps
- **Dependency Injection & Navigation:** GetIt | Injectable | go_router
- **APIs & Networking:** RESTful APIs | Dio | HTTP | JSON Parsing | Authentication
- **Media & TV:** Video Streaming | Media3 / ExoPlayer | media_kit | fvp | Android TV | Fire TV | D-pad Focus Navigation
- **Data & Services:** Firebase | Hive | Local Caching | Push Notifications | Google Maps API | QR Code Scanning | Crashlytics
- **Testing & Quality:** Unit Testing | Widget Testing | Integration / E2E Testing (Patrol) | Code Review | Performance Optimization
- **Tools & Workflow:** Git | GitHub | GitLab | CI/CD | Jira | Agile | Scrum
- **Soft Skills:** Teamwork | Communication | Problem Solving | Time Management | Research
