Summary

Flutter Developer with 2+ years of experience building scalable cross-platform applications using Flutter and Dart. Experienced in Clean Architecture, feature-first development, and modern state management with BLoC, Cubit, and Provider. Skilled in RESTful API integration, secure authentication, real-time features, local data persistence, and performance optimization. Experienced in developing and maintaining applications across mobile, Android TV, and desktop platforms, with a strong focus on clean, maintainable, and production-ready code. Comfortable working in Agile teams, participating in code reviews, debugging complex issues, and following software engineering best practices.

Experience

Flutter Developer, MIMOCODES **Mar 2026 – Present**

Developed a scalable multi-flavor Flutter application using Clean Architecture, Feature-First, Riverpod, and Dependency Injection.

Built and optimized cross-platform applications for Android TV, Windows, Linux, and macOS, with a strong focus on responsive layouts, TV navigation, keyboard/D-pad focus management, and platform-specific behavior.

Implemented and maintained media streaming and playback features, including Live TV, Movies, Series, Replay, Favorites, playlist management, caching, auto-play behavior, and Android TV/Fire TV playback optimizations.

Managed production releases, installers, flavors, environment configuration, and application updates, while debugging complex platform-specific issues and improving application stability and performance.

Collaborated within an Agile development team through Git workflows, code reviews, Jira tasks, debugging, refactoring, and maintainable engineering practices.

Top Skills: Flutter | Dart | Clean Architecture | Feature-First Architecture | Riverpod |Bloc | Cubit | Dependency Injection | REST APIs | Media Streaming | Android TV | Windows | Linux | macOS | Multi-Flavors | Git | CI/CD | Performance Optimization

Flutter Developer, MasteryHub **Sept. 2025 – Mar 2026**

Built scalable Flutter apps using Clean Architecture and best practices.

Integrated Google Maps, QR scanning, identity verification, and push notifications.

Managed state efficiently with Bloc and Provider for high performance.

Consumed secure REST APIs using Dio with GetIt for clean, testable code in Agile teams.

Top Skills: Clean Architecture (Mobile) | State Management: Bloc, Provider | Git & GitHub | REST API Integration (Dio) | Dependency Injection (GetIt) | Google Maps Integration | Push Notifications | Code Reviews

Flutter Developer Intern, Elevate **Oct 2024 – Apr 2025**

Developed cross-platform apps for Android and iOS using Flutter & Dart, following Clean Architecture and BLoC/Cubit for scalable code.

Integrated RESTful APIs, implemented unit testing, and conducted code reviews to ensure high code quality.

Collaborated with teams using Agile/Scrum, Jira, and GitHub in a fast-paced development environment.

Top Skills: Unit Testing, State Management: BLoC, Cubit, Dart, Flutter, Firebase, Git, GitHub, RESTful API Integration, Agile & Scrum Methodologies

---

Education Qualification

Bachelor's Degree in Computers and Artificial Intelligence

Helwan University **June 2025**

GPA: 3.51 / 4.0 | Grade: A

Technical Skills

Mobile Development: [Flutter | Dart | Cross-Platform (Android & iOS) | Firebase | Google Maps API | Hive]

State Management: [BLoC | Cubit | Provider | Riverpod]

Architecture & Core Concepts: [Clean Architecture | SOLID Principles | OOP | Design Patterns | Problem Solving]

APIs & Networking: [RESTful APIs | Dio | HTTP | API Integration | JSON Parsing]

Tools & Integrations: [GetIt (Dependency Injection) | Push Notifications | QR Code Scanning | Crashlytics]

Testing & Code Quality: [Unit Testing | Widget Testing | Code Review | Best Practices]

Version Control & Workflow: [Git | GitHub | GitLab | Agile | Scrum | Jira]

Soft Skills: [Teamwork | Communication | Time Management | Research]

Projects

Maskany – Dormitory Management System – Graduation Project

Developed a fully deployed dormitory management system currently in use at Helwan University, automating student registration, housing requests, room allocation, meal management, and penalty tracking. Implemented secure authentication, role-based access control, real-time updates, and Excel import/export to ensure efficient and reliable operations.
Reduced administrative workload by 30% through automation of student housing and meal management processes.
Handled up to 500+ concurrent student requests during performance testing without failures, ensuring system stability under high load.

FitMaster – Fitness Companion App

Developed a cross-platform fitness app providing personalized workouts, AI-powered guidance, and smart tracking for users at all levels. The app enhances health and performance through tailored exercise routines, meal planning, and bilingual support.

Implemented secure authentication, AI fitness coaching, skill-level based routines, video instructions, daily personalized plans, and comprehensive exercise categorization, ensuring an engaging and user-friendly experience.

Language

Arabic (Native) | English (Fluent)
